# WiFi Update VDO TPMS Pro

VDO

## **WiFi Configuration**

Go to Settings and press OK.

Go to Update/Wifi and press OK.

Select the *WiFi* icon. If the icon indicates *NO*, press *OK*.

| WIFI ACTIVATED                            | : NO                       |
|---|----------------------------|
| SSID                                      | WiFi name // WLAN Name     |
| PASSMORD                                  |                            |
| WIFI STATUS                               | : DISCONNECTED             |
| To set up <b>Hi</b> -Fi, upda<br>it here: | ate your PC software. Find |
|   | /ини.vdo.de/tpmspro        |

This screen shows the WiFi status. Press *OK* to activate WiFi.

Select YES and press OK to activate WiFi.

Available networks will be displayed. Select your network and press *OK*.

|   |   | PASSWORD |   |            |   |   |   |   |   |  |
|---|---|----------|---|------------|---|---|---|---|---|--|
|   |   |          |   |            |   |   |   |   |   |  |
| а | b | С        | d | е          | f | g | h | i | j |  |
| k | Ι | m        | n | 0          | р | q | r | S | t |  |
| u | ۷ | w        | х | У          | z | , | • | " | • |  |
| - | ? | ;        | ! | ABC<br>123 |   | - |   |   | 4 |  |
|   |   |          |   |            |   |   |   |   |   |  |

Enter the password of your network and then press the enter button.

Your device is now connected to your WiFi network.

## VDO

### WiFi Update

Go to Settings and press OK.

Go to Update/Wifi and press OK.

Go to Update and press OK.

Press OK to start the WiFi update.

A loading bar will appear, showing the update process.

The device will restart several times during the update process. Do not power off or unplug the device during the update process. The update may take up to an hour to complete, depending on your WiFi connectivity strength.

The update process is completed.
